1.POSTMAN :

- **Postman** is used to test or verify the functioning of Rest API's.
- Postman is an application used for API testing. It is an HTTP client that tests HTTP requests, utilizing a graphical user interface, through which we obtain different types of responses that need to be subsequently validated.
- Almost any functionality that could be needed by any developer is encapsulated in this tool. It is used by over 5 million developers every month to make their API development easy and simple.

POSTMAN

The AXIS SARAL Portal helps us to perform excellence and organizational growth. This transformative project aims to cultivate a culture of efficiency, collaboration, and empowerment within our organization.

Key Takeaways:

- With a centralized vital information, employees can effortlessly access policies, SOPs, and essential documents.
